# Projects

## Extra-Curricular Management System

[Github Link](#)

Created and lead my team to create a software solution that would centralize the communication and workflow between the Students, Clubs & Forums, and the University's organizational bodies. To ensure the highest quality of education, advanced network programming and interactions with the local system were applied. Submitted as the project for Advanced Object Oriented Programming Laboratory

## lamSpecial.com

[Github Link](#)

Created and lead my team to create a software solution that would tackle the taboo behind people with special needs, provide easier access to seek professional aid, and donation systems for better causes. To ensure our web app provides the best services we've ensured simple UI designs, financial APIs to ease payment processes, and chat systems to connect with professionals. Submitted as the project for Database Management Systems Laboratory

## Encryption-Decryption Chatapp Python

[Github Link](#)

Created a desktop-based chat application using Tkinter. Although the concept maybe simple, advanced encryption and decryption algorithms were used to ensure safe messaging. Submitted as the project for Applied Cryptography
